
Dataset, episode kind, seed
Draw contiguous block
both classes ≥ 5% of rows
Reference: 2000 rows
fit f on 1500, importance on 500
Pool: next 20,000 rows
same period, no built-in drift
Draw onset s in [10, 16]
Episode kind?
shift
clean
label change
Gradual / abrupt shift
feature j from important or
unimportant half; weights ∝ exp(λ(t) σ z_j)
Clean
uniform sampling
Label change
flip labels, p → 0.3, if z_k > 0
Sample 45 batches
300 rows each, with replacement
True accuracy of f
per batch, from the kept labels
Event after onset?
no
yes
Harmless episode
no event
Harmful episode
event at or after onset
Spurious episodes (event before onset) are
excluded.
Per dataset: 10 clean, 30 gradual,
15 abrupt and 10 label-change episodes.
