
Exploratory phase (v1-v5)
v1
v2
v3
v4
v5
Risk calibrator on synthetic data
0 of 20 events detected
Redesigned scenarios, state target
Synthetic gain; real data negative
Delay-aware CBPE (accuracy units)
Transfers; little early warning
Delay-anchored accuracy estimator
Lower nowcast error; trade-off
Harmless vs harmful triage
Works on synthetic, not on real
Pre-registered phase (v6-v10)
v6
v7
v8
v9
v10
Pre-registered real-data benchmark
FAILURE: H1-H5 all fail
Stream-normalized drift watch
PARTIAL SUCCESS: T1 0.87
Importance-weighted harm tier
PARTIAL SUCCESS: AUROC 0.78
Nonlinear harm estimators
Not adopted: dev gate failed
Stricter alerting rules
Not adopted: T2 0.30 on fresh data
failed
mixed / exploratory
adopted (partial success)
pre-registered follow-up, not adopted
