New idea after a verdict
Write protocol
hypotheses, pass rules, datasets
Commit config module
timestamped in git
Develop on development data
choose thresholds and rules
Development gate passed?
yes
no
Stop, report negative
no fresh data used (v9)
Freeze thresholds
SHA-256 fingerprint in protocol
Download confirmation data
datasets never used before
Fingerprint matches?
no
Refuse to run
yes
One-time confirmation run
Verdict script
applies the frozen pass rules
Publish verdict
success, partial success or failure
Deviation log
every change dated, with its reason, recorded before any affected episode is built
